

Joel H. W. Weinberger, Ph.D.

CONTACT INFORMATION

Mobile: (415) 309-0684
E-mail: jww@joelweinberger.us
Website: <http://www.joelweinberger.us>

RESEARCH INTERESTS

Web security, systems security, privacy, programming languages, software engineering

EDUCATION

University of California, Berkeley, Berkeley, California USA

Ph.D., Computer Science, December, 2012

Thesis: *Analysis and Enforcement of Web Application Security Policies*

Advised by Dawn Song

Brown University, Providence, Rhode Island USA

M.S., Computer Science, May, 2007

B.S., Computer Science & History, May 2007

HONORS AND AWARDS

Brown University: graduated Magna Cum Laude, Phi Beta Kappa, 2007

ACADEMIC EXPERIENCE

University of California, Berkeley

Graduate Student Researcher

September, 2008 - December, 2012

Research and coursework towards Ph.D. with a focus on security and the Web.

Graduate Student Instructor

January, 2010 - May, 2010, January 2012 - December, 2012

Graduate student instructor for advanced undergraduate computer security courses. Shared responsibility for leading sections, developing coursework including homeworks and projects, and grading.

Course Work

Security, Program Analysis, Programming Languages, Network Security, Systems, Cryptography, Intellectual Property Law, Surveillance and Society

Brown University

Teaching Assistant

September, 2005 - December, 2012

Held office hours, created and graded assignments, and led lab sections for Computer Systems, Computer Security, and Operating Systems courses.

Selected Course Work

Operating Systems, Programming Languages, Dynamic Access Control and Verification, Combinatorial Optimization, Computer Networks

Meyerovich, L., Weinberger, J., Gordon, C., and Krishnamurthi, S. *ASM Relational Transducer Security Policies*. Brown University Technical Report CS-05-12, 2006.

RESEARCH

Web Application Script Type-checking for Security

Using dependent typing and refinement typing to statically enforce security properties of JavaScript. Evaluating the power of these techniques on real web scripts, focusing on web browser extensions.

Web Application Sanitization

Examining how web applications perform sanitization, both on the server and on the client. Looking at ways of identifying sanitization checks on the server and client. Building tools to create and enforce sanitization policies in web applications.

JavaScript Heap Analysis

Instrumenting a JavaScript engine to map JavaScript objects and their relationships to one another. Using this tool to verify the security of web browsers and web applications, as well as finding vulnerabilities in them.

Database Privilege Separation

Creating a system for applying the principle of least privilege to software database access. Allows for a single database connection to be securely shared among program modules while guaranteeing minimum access rights to the database for each module.

Verification of Web Programs

Modeled an access control system for a web application and developed an atomic update module operator for Abstract State Machines (ASMs).

PROFESSIONAL EXPERIENCE

Coverity, San Francisco, California, USA

Research Intern

June 2012 - August 2012

Office of the CTO working on security technology research. Focused on next-generation analysis of web applications. In particular, looked at ways to connect server static analysis with client analysis to try to find new sets of web application vulnerabilities.

Microsoft Research, Redmond, Washington USA

Research Intern

June 2011 - August 2011

Intern in the Research in Software Engineering (RiSE) group, working with Juan Chen, Ben Livshits,

and Nikhil Swamy. Focused on type checking of JavaScript using F*, an F \sharp -like language with dependent and refinement typing. Worked on statically enforcing complex security policies on web applications through the type system, focusing on browser extensions. Built a compiler from JavaScript to F* and worked on type checking on resulting code for correctness and security properties.

Sun Microsystems, San Francisco, California USA

Software Engineer

July 2007 - July 2008

Full-time software engineer in the Fishworks advanced development team on Sun Storage 7000 NAS products. Worked on iSCSI and FTP integration, clustering interface support, and appliance stack management. Worked on operating system, application, and AJAX web development.

VMware, Palo Alto, California USA

Intern Software Engineer

June 2006 - August 2006

Intern in the VMware ESX Core Kernel group. Developed shared memory infrastructure and signal handling capabilities.

TECHNICAL SKILLS Programming Languages: C/C++, Java, JavaScript, F#, OCaml, Python, BASH, Scheme, HTML
Computer Systems: Linux, Solaris, MacOS X, Windows

INTERESTS Rock climbing, tap dance, skiing (alpine and water), coffee, running, road biking, history
