

## Joel H. W. Weinberger

---

### CONTACT INFORMATION

723 Soda Hall  
Computer Science  
UC Berkeley  
Berkeley, CA 94720 USA

*Mobile:* (415) 309-0684  
*E-mail:* [jww@cs.berkeley.edu](mailto:jww@cs.berkeley.edu)  
*Website:* <http://www.cs.berkeley.edu/~jww>

### RESEARCH INTERESTS

Web security, systems security, privacy, programming languages, software engineering

### EDUCATION

**University of California, Berkeley**, Berkeley, California USA

Ph.D. Graduate Student, Computer Science, Expected Dec 2012  
Advised by Dawn Song

**Brown University**, Providence, Rhode Island USA

M.S., Computer Science, May, 2007  
B.S., Computer Science & History, May 2007

### HONORS AND AWARDS

Brown University: graduated Magna Cum Laude, Phi Beta Kappa, 2007

### ACADEMIC EXPERIENCE

**University of California, Berkeley**

*Graduate Student Researcher*

**September, 2008 - present**

Includes current Ph.D. research and coursework with a focus on security.

*Graduate Student Instructor*

**January, 2010 - May, 2010, January 2012 - present**

Graduate student instructor for advance undergraduate computer security course. Shared responsibility for leading sections, developing coursework including homeworks and projects, and grading.

*Course Work*

Security, Program Analysis, Programming Languages, Network Security, Systems, Cryptography, Intellectual Property Law, Surveillance and Society

**Brown University**

*Teaching Assistant*

**September, 2005 - present**

Held office hours, created and graded assignments, and led lab sections for Computer Systems, Computer Security, and Operating Systems courses.

*Selected Course Work*

Operating Systems, Programming Languages, Dynamic Access Control and Verification, Combinatorial Optimization, Computer Networks

### REFEREED PUBLICATIONS

Weinberger, J., Saxena, P., Akhawe, D., Finifter, M., Shin, R., Song, D. *A Systematic Analysis of XSS Sanitization in Web Application Frameworks*. European Symposium on Research in Computer Security (ESORICS), 2011.

Weinberger, J., Barth, A., Song, D. *Towards Client-side HTML Security Policies*. Workshop on Hot Topics in Computer Security (HotSec), 2011.

Felt, A., Finifter, M., Weinberger, J., Wagner, D. *Diesel: Applying Privilege Separation to Database Access*. ACM Symposium on Information, Computer and Communications Security (ASIACCS), 2011.

Finifter, M., Weinberger, J., and Barth, A. *Preventing Capability Leaks in Secure JavaScript Subsets*. Network and Distributed System Security Symposium (NDSS), 2010.

Barth, A., Weinberger, J., and Song, D. *Cross-Origin JavaScript Capability Leaks: Detection, Exploitation, and Defense*. USENIX Security Symposium, 2009.

Gordon, C., Meyerovich, L., Weinberger, J., and Krishnamurthi, S. *Composition with Consistent Updates for Abstract State Machines*. International ASM Workshop, 2007.

#### TECHNICAL REPORTS

Swamy, N., Weinberger, J., Chen, J., Livshits, B., Schlesinger, C. *Monadic Refinement Types for Verifying JavaScript Programs*. Microsoft Research Technical Report, 2012.

Meyerovich, L., Weinberger, J., Gordon, C., and Krishnamurthi, S. *ASM Relational Transducer Security Policies*. Brown University Technical Report CS-05-12, 2006.

#### RESEARCH

##### **Web Application Script Type-checking for Security**

Using dependent typing and refinement typing to statically enforce security properties of JavaScript. Evaluating the power of these techniques on real web scripts, focusing on web browser extensions.

##### **Web Application Sanitization**

Examining how web applications perform sanitization, both on the server and on the client. Looking at ways of identifying sanitization checks on the server and client. Building tools to create and enforce sanitization policies in web applications.

##### **JavaScript Heap Analysis**

Instrumenting a JavaScript engine to map JavaScript objects and their relationships to one another. Using this tool to verify the security of web browsers and web applications, as well as finding vulnerabilities in them.

##### **Database Privilege Separation**

Creating a system for applying the principle of least privilege to software database access. Allows for a single database connection to be securely shared among program modules while guaranteeing minimum access rights to the database for each module.

##### **Verification of Web Programs**

Modeled an access control system for a web application and developed an atomic update module operator for Abstract State Machines (ASMs).

##### **Microsoft Research, Redmond, Washington USA**

*Research Intern*

**June 2011 - August 2011**

Intern in the Research in Software Engineering (RiSE) group, working with Juan Chen, Ben Livshits, and Nikhil Swamy. Focused on type checking of JavaScript using F\*, an F $\sharp$ -like language with dependent and refinement typing. Worked on statically enforcing complex security policies on web applications through the type system, focusing on browser extensions. Built a compiler from JavaScript to F\*.

##### **Sun Microsystems, San Francisco, California USA**

*Software Engineer*

**July 2007 - July 2008**

Full-time software engineer in the Fishworks advanced development team on Sun Storage 7000 NAS products. Worked on iSCSI and FTP integration, clustering interface support, and appliance stack management. Worked on operating system, application, and AJAX web development.

##### **VMware, Palo Alto, California USA**

#### PROFESSIONAL EXPERIENCE

*Intern Software Engineer*

**June 2006 - August 2006**

Intern in the VMware ESX Core Kernel group. Developed shared memory infrastructure and signal handling capabilities.

TECHNICAL SKILLS    Programming Languages: C/C++, JavaScript, HTML, F#, OCaml, Java, Python, BASH, Scheme  
Computer Systems: Linux, Solaris, MacOS X, Windows

INTERESTS            Rock climbing, tap dance, skiing (alpine and water), coffee, running, road biking, history
